TROUBLESHOOTING

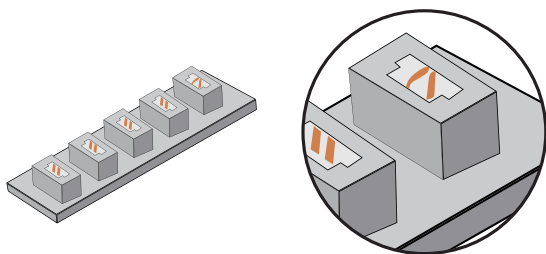

The small size of lighting accessories makes them susceptible to damage during installation, and the following issues are common causes of failure.

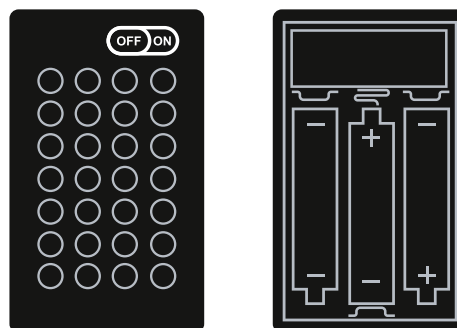

1.Ensure that the connectors are correctly installed as shown in the picture.

2.Check if the wires are disconnected or broken from the solder joints.

3.Check the internal pins of the connector sockets. The internal pins of a properly working connector port should be straight. If the small pins are bent, they may be considered faulty ports.

This diagram shows a circuit board assembly with three numbered callouts:

- 1**: A red wire connected to a small red component on the left edge of the board.
- 2**: A red wire connected to a small red component on the right edge of the board.
- 3**: A red wire connected to a large red component in the center of the board.

 The board is populated with various components, including integrated circuits, resistors, and capacitors. A red wire is also connected to a small red component on the left edge of the board.
